

IN THE SPECIFICATION:

Please amend the paragraph beginning on page 10, line 6, to read as follows:

Further, on the surface of the circuit board 11, an insulating layer 17 is formed on the other area than the area where the base layer 14 is formed. The insulating layer 17 which is called green resist serves to protect the surface of the circuit board ~~[[17]]~~ 11 and wiring pattern. The insulating layer 17 is made of epoxy resin to have electrical insulation, and has a thickness of about 7 μm .
